

CHARCOAL

IS NOT A DIRTY WORD

use feedstock:
prunings, maize cobs, bamboo

save energy

use less charcoal
on energy efficient cookswell jikos

harvest responsibly

plant trees as a cash crop

protect our environment

save money

Charcoal is a renewable resource and can be produced without cutting down trees. The process does not have to be dirty or difficult - and it certainly does not have to involve deforestation.

Cookswell Jikos and the Woodlands 2000 Trust promote the making of charcoal from tree limbs and small bits of wood - not from cutting down the tree. We provide our customers with charcoal making kilns, training on tree planting as a cash crop and as a money-making activity.
