

The Seed to Ash Cycle

The seed to ash cycle shows how we can responsibly manage and utilize trees and fuel to ensure that we do not deforest Kenya. Correct management and utilization of trees is the key to promoting an environmentally friendly green energy solution for East Africa.

All of us can easily participate in the seed to ash cycle by planting trees, using wood without cutting the whole tree down, and using energy saving stoves.

Do you have some space in your shamba? Plant a tree! Do you like nyama choma? Make sure you're cooking on an energy-efficient stove! Do you use charcoal? Make your own charcoal to save money and protect trees!

It is so easy:

1. Plant a seed!
2. Harvest trees responsibly!
3. Produce your own charcoal without cutting a tree!
4. Use an energy efficient stove to reduce your charcoal use!

We should all take the responsibility to protect our environment for our children and grandchildren.
